

## THE PROXY SNATCHER QUICK START GUIDE

**This brief guide will show you how to use The Proxy Snatcher to grab those all important proxies to use as you wish !**

**It's very simple to use!**

**Firstly, install the software to your computer and double click it ( the exe file ) to start the software. You will be presented with a licence input box. Please enter your licence key purchased as in the picture below & click “check licence”:**

**Depending on which version you have purchased ( [http/s](http://s) or Elite or Socks ) the software will look something like this below when opened if the key is a valid key:**

PROXY SNATCHER -HTTP/S VERSION- Find thousands of proxies in seconds!

**Results Table**

	IP:Proxy Address	Connection ok	PngTest	Webtest
▶	213.14.72.137:1080	False	False	False
	5.58.47.25:3629	False	False	False
	91.107.194.192:8080	False	False	False
	46.97.238.46:5678	False	False	False
	103.82.8.193:4153	False	False	False
	45.61.187.67:4002	False	False	False
	38.83.74.2:443	False	False	False
	78.47.227.242:45121	False	False	False
	221.7.159.227:51080	False	False	False
	123.205.68.113:80	False	False	False
	98.170.57.249:4145	False	False	False
	123.159.126.14:8085	False	False	False

Load Web IP's into Table

Log Status

**Grab HTTP/S PROXIES with PROXY SNATCHER !**

### Snatching Proxies/IP's

To find proxies from multiple sources around the globe, it couldn't be easier! Simply click the “Snatch Web Proxies” button and this will identify & import the list of available proxies that will be shown in the proxy table in the next step.

Next, simply click the “Load IP's into table” button and the software will work on importing all of the identified proxies into the results table for you to view, save or test.

**PLEASE NOTE THIS COULD TAKE UP TO 30 SECONDS OR MORE DEPENDING ON HOW MANY PROXIES ARE BEING SOURCED !**

Once ready, the proxies will be populated in the results table. From here you can save these to a txt file for later use , or you can test these by clicking the “**Test Proxies**” button. Please note that testing thousands of proxies will take considerable time, perhaps over an hour depending on numerous factors including computer processing speed, internet connection/speed etc.

**\*It's better to save the list to a FOLDER and test these in batches of 500 for quicker results.**

During the test, there will be **3 tests per proxy** & the fields in the table will turn from **false to true** if each test is positive & the proxy connects on all 3 fronts ( **connect/ping/website** ). Wait for the test to complete, and this time for this will depend on how many proxies are being tested and their response time ( the more proxies in table with longer response times will take much longer)

## **DELETE SELECTORS**

Once test is complete you can use the **DELETE SELECTORS** to remove rows from the table that suit you. For example you may wish to remove those rows that have a test result of False / True/False. To do this simply click the red delete F/T/F .

**Important : You may need to click the same delete selector more than once, as there may be many F/T/F results within the table and these will need to be deleted in batches till none of that combination remain.**

**You can use as many delete selectors as you wish to reduce the table to only those rows you are interested in , example T/T/T for best proxies showing all 3 positive tests.**

Once you have the proxies you want, simply click **EXPORT LIST** and this will save the list in txt format. Then you will have a list of good, tested working public proxies that can be used for whatever projects you are involved in.

**Important: Public proxies have a limited lifespan & can stop working if too many users are using them simultaneously, so its important to keep your list fresh by checking it routinely and testing the list. Or by testing another new list of proxies found by the software in batches to ensure you have a constant supply of working proxies.**

**And that's all there is to it !**

**We hope you enjoy snatching thousands of proxies with Proxy Snatcher !**
